

Report to the Board of Directors

Enc

Title of Report	Board Assurance Framework 2016/17 (v4.1)
Author	Neil Gibson, Head of Quality and Assurance
Executive Lead	Birju Bartoli, Deputy Chief Executive/Executive Director of Performance and Governance
Responsible sub-committee	N/A
Date of meeting	26 th January 2017
Executive Summary	<p>The Trusts Assurance Framework identifies the strategic objectives, priorities and key risks to achieving those priorities. For each identified risk, the controls and assurances are identified together with the responsible lead Director.</p> <p>The Assurance Framework was reviewed in conjunction with the Trust combined risk register at Assurance Committee on the 17th January, there were no further risks which required escalation to the Board of Directors.</p>
Assurance Framework reference	N/A
Alignment to Trusts Annual/Strategic Plans or business unit annual plans	N/A
Risk rating (very high, high, medium, low risk)/ any recommended changes	N/A
Compliance/ regulatory requirements (if applicable)	N/A
Actions required by the Board	The Board is asked to note and approve the content of the report.

Assurance Framework for the Key Strategic Objectives 2016/17

Report to Board of Directors, Thursday 26th January 2017

1. Introduction

The system for assurance of the delivery of the Trust's strategic objectives is by the Assurance Framework (AF). In line with best practice recommended by "The Intelligent Board" the Audit Committee and the Board of Directors considers the progress of its strategic objectives at quarterly intervals to support the self-certification to Monitor.

This report needs to be considered in conjunction with the monthly Board of Directors Safety & Quality Compliance Report and the latest report to be reported to the board was January 2017.

NHS Improvement (NHSI) – Single Oversight Framework (SOF)

NHSI's <i>Single Oversight Framework</i> became operational from 1 st October, 2016 Performance against the previous (Monitor) Risk Assessment Framework for Q1 and Q2 is given in Appendix A.			
	Pre - SOF	Q3	Q4
	Segment 1	Forecast	

Performance and quality metrics

Performance			
Operational performance metrics (5 acute; 5 mental health) (see note 1)		6 standards met ***	
Quality of care (safe, effective, caring, responsive) monitoring metrics	See quarterly Excellence in Safety & Quality report

Board statement

Annual Quality Governance	Fully met	Fully met	Fully met	
---------------------------	-----------	-----------	-----------	--

Other factors

Material risks	No	No	No	
----------------	----	----	----	--

Single Oversight Framework (SOF) Segment

Segment 1 **	***	
--------------	-----	--

* Score = 1 is the best score possible

** Segment = 1 means the provider has maximum autonomy

*** Amber means there is a risk to the trust remaining in Segment 1 (because of performance on A&E four hour waits, Cancer 62-day GP referral waits, Cancer 62-day screening referral waits and on the IAPT performance for people moving to recovery on completion of treatment)

Notes

- Five acute standards with monthly frequency: A&E four hour wait; 18 weeks RTT incomplete pathways; Cancer 62 day waits (2 standards); and 6 week wait for diagnostic procedures.
Two mental health standards with monthly frequency: Data quality metrics for Mental Health Services Data Set submissions to NHS Digital (one for achievement by 2016/17 year-end);
Three mental health standards with quarterly frequency: Improving Access to Psychological Therapies: proportion of people completing treatment who move to recovery and waiting times (2 standards) to begin treatment

A copy of the Trust’s Assurance Framework for 16/17, based on the strategic objectives is enclosed. A full version of the Assurance Framework document and process is available at the Audit Committee (AC) meeting and also on the following link <X:\Audit Committee\Assurance Framework\2016-17 Assurance Framework>

Following a recommendation from Internal Audit, nominated lead officers for each of the risks within the assurance framework were asked to confirm they remained accountable for the risk and also the accuracy of the information contained within the assurance framework. Nominated lead officers have each confirmed the accuracy of the latest update to the Assurance Framework.

2. Key Strategic Risks

The graph below provides a quarterly summary of both the overall number and grade of risks contained within the Assurance Framework.

Since the review of the 2016/17 Assurance Framework in October 2016, there have been no further risks added or removed from the Assurance Framework.

A summary of the current very high/high risks is shown below. Each of our high risks has a supporting performance improvement plan approved by the Board of Directors via the appropriate sub-committee.

Very High Risks

Ref 2.1 NHSi Single Oversight Framework

- A&E 4 hour target - Quarter 3 performance was 91.45%, which is outside of the national A&E 4 hour wait target of 95% (and the Trust standard of 98%). In addition, performance was not in line with the Trusts improvement trajectory for STF monies, with a financial impact of approx. £150k for the quarter. Activity continues to increase due to winter pressures with ED performance remaining challenging, especially at NSECH. There continue to be a number of quality improvement projects on-going to improve flow in ED and across the organisation.
- Hospital acquired Clostridium difficile - the cumulative position is no more than 30 cases for the year 16/17, quarter 3 cumulative actual outturn was 18 against a trajectory of 23.
- Cancer: GP referral to treatment – the 85% target was not met for quarter 3 (with only two months meeting the target), with provisional performance for the quarter of 84%. There is on-going work regarding capacity and demand, including increasing theatre capacity to address this issue. This remains a risk due to the on-going breach numbers and no immediate

solution. Along with the quality impact of failing this target, there is also an additional risk of not receiving transformation monies by not meeting the required standard or improvement trajectory.

- National screening service referral (Bowel cancer screening), provisional performance for quarter 3 is 68% against a target of 90%.

Ref 2.17 CQC Regulation 18: Staffing (was high risk)

There are a number of staffing issues which are contributing to this being a very high risk, these relate to:

- Insufficient Breast and General Radiologists – a robust reporting radiographer timetable has been implemented and Locums employed to undertake the reporting to alleviate any risks. As reported under 2.8 below, agreement through EMT has been reached to pursue overseas recruitment to these posts.
- Recruitment of theatre nurses continues to be problematic due to national shortages of these staff. To address this shortage a further targeted recruitment campaign is planned.
- Maternity Staffing – due to the increase in births at NSECH, there are currently shortfalls in the level of midwifery staffing within the Trust. EMT has now approved further funding for recruitment of additional midwives.
- Monitor Agency Fee Cap – the Trust is currently unable to wholly comply with the current Monitor cap on agency fees. Each potential breach of the cap is assessed on an individual basis, with the maintenance of patient safety being the overriding concern, with approval obtained from the Executive Director of Operations/Deputy Chief Executive. There is the potential for an increased number of breaches when the agency cap is tightened further from April 2016. A separate paper on this issue was presented to the Trust Board in January 2016.
- Medicine Nursing Rota - due to nursing vacancies and sickness within Medicine there continues to be a number of gaps within the nursing rota. The action plan to mitigate against these gaps continues to be implemented and is closely monitored by the Business Unit.

Ref 4.1 – 4.3: Overall Healthcare Funding

The CSR announcement resulted in a good settlement for the NHS (set against the context of the implications for the wider public sector) however finance does remain a key issue across the NHS and all public sector organisations.

This reset the efficiency challenge equivalent to 2% per annum. There remains the local issue of two very challenged CCGs with North Tyneside CCG forecasting an affordability gap of c£40m by the end of 2015-16, which is requiring joint working across the local health economy.

The CSR presents further risks which could have significant impacts across the local authorities and social care. The implications of the CSR round together with the implications of the "living wage" could have significant consequences in terms of social care provision with a consequent impact on healthcare.

High Risks

Ref 1.2 Accountable Care Organisation

The Trust is involved in the development of an accountable care organisation (ACO) both in Northumberland (as part of the PACS Vanguard bid) and in North Tyneside. A key component of this is moving away from PBR and more towards a capitated budget. This movement is recognition that the current system is not sustainable longer term.

Development of the ACO in North Tyneside has now officially 'paused', following the CCG being placed under formal directions by NHS England. Formal guidance with regards to the implications of the direction orders for NT CCG are still on going.

Work on the Northumberland ACO continues at pace with the prior information notice (PIN) having been issued by the CCG, which closed on 23rd September 2016. As a consequence of this PIN, the Trust were named as the proposed contract holder. There has been no formal challenge to the PIN.

The outline business case was submitted on the 23rd December following approval by both the Trust Board and Northumberland CCG Board. The Trust awaits feedback from NHSi and NHS England. Due diligence and associated transition work streams continue across the Trust and CCG.

2.3 Save Lives and Reduce Harm

Pressure ulcers and Falls have been identified from incident reporting and safety thermometer as key areas for improvement, both feature as Trust priorities for the year. Improvement plans, led by the Executive Director of Nursing are in place and will continue to be monitored by the Safety and Quality Committee. The risk rating has been discussed at Safety and Quality Committee with agreement to maintain the current risk rating.

Ref 2.5: Quality and financial incentives

- Surgical Site Infections - The reduction in SSI (Orthopaedic) has been a key priority since 2012/13 and remains so for 2016/17. In the year to November 2016, 18 deep infections have been reported (5 knee and 5 hip and 8 hemiarthroplasty). RCAs for all cases continue to be undertaken with actions being monitored via the SSI working group and Trauma and Orthopaedic board.
- MRSA - The target for the number of MRSA positive cases, post 48 hrs admission is 0 for the period 16/17. In 2016/17, there have been 3 positive cases allocated to the Trust. Whilst this is no longer a direct target in accordance with the NHSi Single Oversight Framework, NHSi do reserve the right to escalate a Trust in view of MRSA positive cases.

Ref 2.8 CQC Regulation 9: Person Centred Care

Limitations of breast radiological provision – due to the reduction of Breast Radiologists and as the inability to successfully recruit to vacant posts, a two stop clinical pathway has been implemented in the interim period to reduce pressure on the service and meet two week wait standards. Following discussions at EMT, the Trust is now looking to pursue overseas recruitment through already well established contacts.

Ref 2.14 Regulation 15: Premises and Equipment

The CSSD function and capacity at both NTGH and WGH is struggling to meet demand with aging equipment. At present a combination of maintenance contracts and in house maintenance is currently ensuring service provision, however due to the aging hardware and issues with services there is a risk to on-going service provision. A business case is being developed to address the issues with initial option estimates ranging from circa £1 million to £10 million, this will be submitted to EMT for consideration in late January/early February.

Ref 5.1 Information and Technology

Maternity E3 system - E3 Euroking is the maternity data capture system that now has no on-going support and is likely to need replacing. It is likely that a new system will need to be implemented given the payment of activity is linked to the activity reports from this system.

Emerging Risks

The Trustwide risk register was reviewed at the Assurance Committee meeting on the 17th January 2017 and no further emerging risks were identified for inclusion on the assurance framework.

4. Actions to close gaps in controls/assurances

Actions to close gaps in controls/assurances are described within the assurance framework, which is attached. This should be considered as a source of accurate, timely and meaningful assurance to the board of directors and should be subject to internal audit reviews similar to other important sources of assurance during 2016/17 and beyond.

5. Recommendation

In line with best practice from the AC Handbook, the Committee is asked to:

- Approve the Assurance Framework
- Note that the high risks have appropriate actions in place to respond to these actions.

Birju Bartoli

Deputy Chief Executive/Executive Director of Performance and Governance
